
SteelDoc Datasheet

STEELDOC is a hosted web based document and process management application designed to automate the processes of a Structural Design and Detailing company. It has been developed by Sollogics Software Technologies, the leading provider of custom ERP solutions development company, to help their customers in efficiently providing quality services to their customers

Feature	Explanation	Benefits
<i>Project Estimation, Manpower planning and Work allotment</i>	Estimate total drawings, number of sheets and calculate total detailing, checking and team lead time.	Know where the each resource is engaged at any time. At the time of allocation know exact time slots for each resource that is free. Save time in resource allocation, keep history of changes made by TL in project management....
<i>Process Workflow</i>	Task flow between different role like checker, detailer, team lead and wire-framer, modeler etc...	Move tasks between detailer, checker, tl and any other team member. Not delay is finding communicating and finding drawings. They are there with the task.
<i>RFI Management</i>	Manage RFI with reference to projects and documents. Attach documents with request and response. Search for all RFI's raised and find their responses in one place.	No time loss in looking for answers to your queries.
<i>Extra Hour Management</i>	Add extra hours in case of change in requirements.	Client can see the extra hours added and the reasons for it. Communication gap is removed

<i>Publishing of Drawings</i>	Publish drawing. Create custom compressed folder structure per customer. Create drawing logs automatically. Attach extrafiles while publishing.	Publishing is a major time saver in terms of both creation of logs/compressed folder structure and reduction of error. Customer satisfaction increases as there are no errors and they get what they want. No special skills of creating logs or folder structure or even email writing skills are required.
<i>Client Dashboard</i>	One click access to any resource in a project, red lines, rfi log, transmittals, full drawing logs and everything that your client might need.	Dashboard is a major client satisfaction booster. It is also a major time saver, in fulfilling client requests for different logs and files at different stages in a project.
<i>Document Management System</i>	All documents are placed in a central repository and searched and downloaded at any time.	Major time saver in finding documents in a project. Never lose a document. Access to all documents on need basis
<i>Role Based ACL</i>	See what you need to see.... Checker sees their project tasks.....	Document access is secure. No time wasted in seeing unnecessary documents.
<i>Email Notifications</i>	Dynamic e-mail notifications sent at different events like when TL is assigned to a project by PM, TL receives email notification. Published drawings are notified to customers with attachments.	No time wasted in lost communication. Email notifications are sent to relevant users.
<i>Reports</i>	Custom reports can be created as per need..... Some default reports....	Take well informed decision. Reports are created on the fly. No need to allocate human resource to create reports for analysis. No dependence on your employees for report generation.

The Dashboard

The dashboard is one place to get all information for any project. It provides on point access to drawing status, rfi status, extra hours, and project data folder.

The Project Data Folder folder gives access to all documents and reports listed below:

1. Design Drawing
2. Red Lines
3. Drawings for Approval
4. Drawings for Fab
5. All NC1 files
6. All DXF files
7. All EJE Files
8. All KSS files
9. FabSuite/FabTrol
10. 3D Mode
11. QC Logs
12. Field Bolt Summary
13. Advance Material List
14. Drawing Transmittal List
15. Complete Drawing Log
16. RFI Log
